Fast, accurate
analysis and
proprietary
features reduce
editing time

Natural, intuitive
editing speeds
report generation

Industry-leading
3-year warranty

The Holter LX® Analysis Software comes in four levels of functionality: Basic, Enhanced, Enhanced Plus, and Pro. Each is tailored to address the varied needs of our diverse user community. The software and efficient file structure on which it is built offer the doctor's office, the scanning service, or the most demanding cardiac research or clinical applications, the fastest and most user-friendly environment in which to reduce megabits of data to the critical reports necessary in today's world. The software supports networking and remote satellite office transmission.

A number of proprietary features make this software unique; the most productive and highly regarded in clinical and diagnostic communities. Contact NorthEast for an informative tour of LX® Analysis Software via the Internet. Sit back, relax, and let our professionals show you beat-by-beat how to use the software. (Broadband or DSL high-speed connection required.)

"...the Gold Standard for our laboratory, ... used in over 200 clinical sites world-wide for continuous monitoring research in acute MI patients."

Mitchell W. Krucoff, M.D., F.A.C.C.
Associate Professor Medicine/Cardiology, Duke University Medical Center
Director, Static & Continuous ECG Core Laboratory, Duke Clinical Research Institute

Holter LX[®] Analysis Software Features

- ◆ Four user levels: Basic, Enhanced, Enhanced Plus, Pro
- ◆ Compatible with all NorthEast monitors
All NorthEast hardware uses the same software and db structure.
- ◆ User-customized reports
Customized reports match your needs, e.g., contact information, diagnostic terms, morphological terms, key phrases and more.
- ◆ LAN/WAN support
Supports local office networks (LANs) and remote, satellite offices (WAN transmit/ receive).
- ◆ Fast, accurate analysis & proprietary features reduce editing time

EQD - Enhanced QRS Detection plus proprietary algorithms means a higher percentage of automatically and correctly characterized beats.

ATC - Adaptive Template Construction fits a series of templates to a wide range of cardiac morphologies, reducing the need for manual intervention.

Compact db structure - An optimized and efficient database structure that does not compromise accuracy simply means faster download times to LX[®] Analysis software.

CMA - Coefficient Matching Algorithms run faster than other products and take less time to re-analyze the data.

ASTAT - Automatic ST segment Analysis Tool sets markers, measures the ST segment on all channels, plots the average and baseline values, highlights events with computer-assisted event selection.

Spectral analysis -- Reveals critical diagnostic information not easily recognized in the time domain.

12-lead display -- When 12-lead data are available, they can be fully displayed. This includes 3D plots and detailed ST/QT measurements with software calipers.

Full disclosure -- Provides this display for a variety of reports and reimbursements as well as clinical studies.

Synchronized SpO₂ -- With the Oximetry option, see the relationship between blood O₂ levels and Holter cardiac data. Quickly separate cardiac and pulmonary issues or recommend further lab work, e.g., full sleep study.

SCCB - Software Controlled Channel Blocking can block any channel(s) in the display to eliminate artifact that obscures good data.

- ◆ Natural, intuitive editing modes speed report generation
Natural drag 'n drop motif provides an easy, intuitive graphical user interface. LX[®] Analysis Software switches rapidly to the right context -- from beat, strip, page, trend or full disclosure; all are just one click away.

- ◆ Industry-leading 3-year warranty
Includes Hotline support and software updates during Warranty period. eMSA (extended Maintenance and Service Agreement) available.
